New Line of Epoxies for the Automobile and Trucking industry to Repair Antique Cars and Truck Parts

Dynamis, manufacturer of epoxies, has launched a full line of metal coatings, protective and epoxy adhesives to repair, reinforce, and protect body parts of cars and trunks as well as antique automobiles. Specially designed for automobile floor, trunk panels, metal tank, fiberglass, machinery mounting, casting, bumpers, radiator, crankcase, and pipe repair, this line offers many unique agents.

Venice, FL, July 16, 2009 – Dynamis announces the release of its new protective adhesives, metal and epoxy coatings for the automobile and trucking industry. This line of epoxies is composed of metal filled mastic, 100% solids epoxy bonding compound, epoxy coating, epoxy resin and epoxy for fiberglass repair.

Dynapoxy New EPO Adhesive is specifically formulated to adhere to most common surfaces. This product is a unique epoxy resins in the industry as it has the capacity of repairing gas tanks and metal tanks, as well as car / truck radiators. In addition, the New EPO Adhesive is ideal for pipe and crankcase.

Dynamis automobile epoxy line includes the FR-3 Repair Kit designed to repair and reinforce rusted or damaged floor and trunk panels in antique automobiles. "As an antique car hobbyist, I noticed a lack of products to restore certain part of antique cars, either not adapted to the specific automobile parts or very costly. This is why we formulated a specific line of epoxy adhesives, resins and coatings that respond to every automobile needs" says John Caramanian, President of Dynamis. The epoxy, adhesive and coating line includes many products that are easy to apply, chemical resistant, sagging free, and weather resistant. "We always innovate and our epoxy product line for the automobile and trucking industry is continually expending. We also offer custom formulation if products are not currently available" says Caramanian.
